

How to Create & Send Your Zoom Keys

A simple, step-by-step guide to connect your own Zoom account to ONTACT, so your class meetings are created automatically. It only takes about 5–10 minutes. 🧑🏫

Why are we asking for this?

To run your classes smoothly, ONTACT creates each Zoom meeting **for you, automatically** — using **your own Zoom account**. To allow this safely, Zoom gives you **3 keys**. You create them once, send them to us, and you never have to make a meeting link by hand again.

The 3 keys you will send us

You will find all three on the same screen inside Zoom (we'll show you where).

1

Account ID

Account ID

2

Client ID

Client ID

3

Client Secret

Client Secret

• Before you begin

- You need your own **Zoom account** and you must be able to sign in to it.
- You should be the **Owner or Admin** of that Zoom account (a normal personal account is fine — you are the owner of it).
- **Recommended:** a **Licensed / Pro** Zoom plan, so your classes are not cut off by the 40-minute limit of free accounts.
- Use a **computer** (not the phone app) — this is done on the Zoom website.

Tip: Please do this on a laptop or desktop. The page you need is only on the Zoom website, not in the mobile app.

• Step-by-step instructions

1 Open the Zoom App Marketplace and sign in

In your web browser, go to <https://marketplace.zoom.us> and click **Sign In** (top-right). Use the same email and password you use for your Zoom classes.

2 Start building a new app

At the top-right, click **Develop**, then choose **Build App** from the dropdown menu.

3 Choose “Server-to-Server OAuth”

You will see a few app types. Find the card named **Server-to-Server OAuth** and click its **Create** button.

Important: Please pick **Server-to-Server OAuth** — not “OAuth”, not “SDK”, not “Webhook”. The other types will not work for us.

4 Give your app a name

A small box will pop up asking for an app name. Type something simple like **ONTACT Class** and click **Create**.

5 Copy your 3 keys

You are now on the **App Credentials** page. This is the most important screen — you will see all **3 keys** here:

On the Zoom screen	What to do
Account ID	Click <i>Copy</i> and paste it somewhere safe.
Client ID	Click <i>Copy</i> and paste it somewhere safe.
Client Secret	Click the eye icon to reveal it, then <i>Copy</i> . Keep it private.

Tip: You can always come back to this “App Credentials” page later to copy the keys again — so don't worry if you miss one.

6 Fill in the basic information

Click **Continue**. Zoom asks for some short details (Company Name, your Name, and your Email). Fill these in — you can simply use **ONTACT** for the company name and your own name and email. Then click **Continue**.

7 Add the required permissions (Scopes)

On the **Scopes** step, click **Add Scopes** and add the following two permissions so we can create meetings for you:

- Search **meeting** → add **“View and manage all user meetings”** (meeting:write:admin)
- Search **user** → add **“View users”** (user:read:admin)

If your Zoom shows longer “granular” names, just add the ones about *creating/managing meetings* and *viewing users*. When done, click **Continue**.

8

Activate your app

Go to the **Activation** step and click **Activate your app**. You should see a green “Activated” status.  That's it — your app is ready.

9

Send the 3 keys to ONTACT

Copy your **Account ID**, **Client ID**, and **Client Secret** and send them back to us using the format on the next page. We will connect them for you — you don't need to do anything else.

• Please copy, fill in, and send this back

Item	Paste your value here
Your name	
Your Zoom login email	
1. Account ID	
2. Client ID	
3. Client Secret	
Your Zoom plan	☐ Free / Basic ☐ Licensed / Pro

Keep your keys safe 🔒 Your **Client Secret** is like a password. Please send it only to ONTACT through our official channel, and do not post it publicly or share it with anyone else. If you ever think it was exposed, you can return to the App Credentials page and click *Regenerate* — then just send us the new one.

• Frequently asked questions

Do I have to pay anything?

No. Creating this app is completely free. (A paid Zoom plan is only recommended so your classes aren't limited to 40 minutes.)

Is this safe? Can ONTACT see my Zoom password?

Yes, it's safe. You are **not** giving us your Zoom password. These keys only allow our system to create class meetings on your account. You can turn it off any time by deactivating or deleting the app in the Zoom Marketplace.

I can't find "Develop" or "Build App". What do I do?

Make sure you are signed in and using a computer browser (not the phone app). If you still can't see it, send us a screenshot and we'll help you right away.

I missed copying the Client Secret. Is it gone?

Not at all. Just go back to **Develop** → **Manage**, open your app, and the **App Credentials** page shows all three keys again.

Will this change anything for my own personal Zoom meetings?

No. Your normal Zoom account, meetings, and settings stay exactly the same.

Thank you for setting this up — it helps every class start on time. 🧡

If you have any questions or get stuck on any step, please contact ONTACT and we'll be happy to help.
